

# CENTRALISED DIGITAL ASSURANCE MANAGEMENT SYSTEM

## Quality & WHSE Field Verification Model

### CENTRALISED QUALITY MANAGEMENT

A fully mobile digital Assurance System that self integrates allows us to centralise all Assurance-related activities in one place, eliminating the need to manage tasks through multiple disconnected systems or spreadsheets which makes data and reporting functions to our clients and data consistent and efficient.

### REAL-TIME REPORTING

With a centralised system such as ours, we deliver real-time reporting, which helps us quickly identify potential issues, report these to our client and take corrective action, where feasible, before they become bigger and in some cases more critical issues.

### CONSISTENT DELIVERABLES

Our system helps us better manage assurance-related documentation, by ensuring that all necessary documentation is captured and stored in a secure, centralised location. It allows us to transfer our clients criteria into our digital format to deliver the desired data and outcome in certain circumstances where OEM particulars are desired for example.

### COST SAVINGS

Automating certain tasks and utilising up to date technology reduces costs by streamlining processes and eliminating the need for manual data entry and collection. It reduces Consultant time factors and reduces the risk of potential errors.

### IMPROVED DECISION-MAKING

By providing real-time access to Assurance-related data and reports, this allows us to efficiently identify and communicate potential issues and risks to our Clients. we can then support decision making, corrective action identification and risk mitigation by our Consultants in the field.

### STREAMLINED PROCESSES

Our system is user-friendly. It streamlines our processes and workflows, reducing the potential risk errors and delays caused by manual processes. We can also provide limited system access to our clients on a case-by-case basis.

### IMPROVED COLLABORATION

By providing limited access to our Clients, we can provide real time data to ensure that if Client subject matter experts are required to assess at risk situations, they have the correct on hand information and a direct link to our in field consultants to provide advice and guidance at the source to help minimise Operational disruption.

### INCREASED EFFICIENCIES

We improve efficiencies by automating certain assurance-related tasks and workflows, freeing up time for other assurance tasks and client deliverables within our capabilities and minimises Operational disruption.

### REGULATORY COMPLIANCE

Regulatory Compliance is supported by providing real-time reporting, consistent documentation and data, and providing remote access to authorised users. Having the assurance data in a centralised location makes it easier to navigate Regulatory Audits, Inspections and Compliance requirements. This provides an efficient and effective approach to any dealings with Regulatory bodies, which has proven mutually beneficial. We can also track non-conformances for closure in real time and automate allocation of actions to personnel for accountability and report on this if desired.
